Hello,

It's with great pleasure that I'm writing to let you know about my favorite supplement—**MaxGXL**. Before I tell you how to get it, here's some information on why it's such an important part of my health program. Almost everyone I know would like to add years to their life and, more importantly, life to their years. Do you sleep as well as you did just a few years ago? Do you have what doctors say are just signs of getting older or maybe even a chronic health challenge? **Would you like to take one simple step to slow the aging process, reduce inflammation, and enjoy overall improved quality of life?** You now have that opportunity, thanks to over 10 years of research by Robert Keller, MD.

Our bodies were designed by God to support optimal health well into old age. They were not designed to get sick from damage within. When our bodies receive proper nutrition, with an emphasis on colorful plant-based foods, there are internal processes that help us maintain optimal health. **When optimal health is achieved, toxins are eliminated efficiently and in a timely manner;** each cell is able to produce energy and quench the free radicals that occur from normal metabolic processes. Healthy cells produce healthy tissues, healthy organs, and ultimately healthy bodies!

Our bodies are short-changed when it comes to nutritional intake and over-burdened with exposure to toxins in our food, water, and air. We are subjected daily to the onslaughts of electro magnetic pollution from cell phones, cell phone towers, wireless computers, and electro pollution from all of the 'high tech' devices that are supposed to enhance our lives. And, unfortunately, our diets are routinely not ideal—even when doing the best we can. **Often our food is deficient in vitamins, minerals, and trace elements due to being grown in nutrient-deficient soil and harvested days and, sometimes, weeks before we see it in the supermarket, natural food store, or on our dining tables.**

The normal function of each individual cell is impaired due to these many factors, as well as a whole host of others. **By the age of 20, the body's ability to produce glutathione, the master antioxidant within each cell, begins to decrease.** With less glutathione available, each cell produces less energy in an effort to slow the free radical damage that results from cellular metabolism, and the process of aging begins to accelerate. **Glutathione is the key element in preventing free radical damage and reversing inflammation that contributes to chronic disease.**

Up until quite recently, there was very little we could do to facilitate the body's innate ability to maintain optimal production of glutathione. The most efficient way to increase glutathione levels was by intravenous injection, since supplemental forms of glutathione are virtually useless as they are degraded in the stomach environment. Any glutathione that survives the stomach environment and makes its way into the blood stream is too large a protein to make its way through the cellular membrane to the inside of the cell where it is needed.

Thanks to the 10+ years of research by Robert Keller, MD, we now have available what may be the most remarkable supplement of our lifetime, MaxGXL—the glutathione accelerator that has been scientifically proven to increase the body's ability to produce this master antioxidant at cellular level by as much as 300% with 3-months consecutive use! WOW. Now we can slow the aging process and add years to our life and life to our years.

I encourage you to take it for 3 months and see how much better you will feel and look. For more information, please visit: www.4HealthBliss.com and click on **Products** or, to order wholesale, click on **Preferred Customer**, or simply call: 801.316.6380 MT and tell them about my recommendation. **MaxGXL has made a positive difference in my life; I know it will do the same for you, too.**

All the best,
Susan S. Jones
